Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) John N. Hatzopoulos

This book is addressed to students and professionals and it is aimed to cover as much as possible the wider region of topographic mapping as it has been evolved into a modern field called geospatial information science and technology. More emphasis is given to the use of scientific methods and tools that are materialised in algorithms and software and produce practical results. For this reason beyond the written material there are also many educational and professional software programs written by the author to comprehend the individual methodologies which are developed. Target of this book is to provide the people who work in fields of applications of topographic mapping (environment, geology, geography, cartography, engineering, geotechnical, agriculture, forestry, etc.) a source of knowledge for the wider region so that to help them in facing relevant problems as well as in preparing contracts and specifications for such type of work assigned to professionals and evaluating such contracting results. It is also aimed to be a reference of theory and practice for the professionals in Topographic Mapping. This book applies a didactics method where with a relatively small effort someone can digest a quite large volume of simple or complicated material of knowledge at a desirable scientific depth within a relative short time interval. The objective that educated people must be "smarter than the machine" and not to treat the machine as a "black box" being "button pushers" has been achieved, through the author's experience in USA and Greece, with relative success by adopting this didactics technique. There are 11 chapters and two Appendices including: Reference systems and Projections, Topographic instruments and Geometry of coordinates, Conventional construction of a topographic map, Design and reproduction of a thematic map, Digital Topographic mapping - GIS, Digital Terrain Models (DTM / DEM), GPS, methods of Photogrammetry, Remote Sensing, new technologies LIDAR, IFSAR, the method of Least Squares adjustment, Description of educational software accompanying the text.

From reader reviews:

Katrina White:

The book Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) make you feel enjoy for your spare time. You can utilize to make your capable far more increase. Book can being your best friend when you getting pressure or having big problem with the subject. If you can make looking at a book Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) to be your habit, you can get considerably more advantages, like add your current capable, increase your knowledge about some or all subjects. You may know everything if you like available and read a e-book Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T). Kinds of book are a lot of. It means that, science reserve or encyclopedia or other folks. So , how do you think about this guide?

Bonnie Camacho:

Do you among people who can't read pleasant if the sentence chained inside straightway, hold on guys this aren't like that. This Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) book is readable through you who hate the straight word style. You will find the info here are arrange for enjoyable reading experience without leaving actually decrease the knowledge that want to give to you. The writer involving Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) content conveys objective easily to understand by lots of people. The printed and e-book are not different in the written content but it just different available as it. So , do you even now thinking Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) is not loveable to be your top checklist reading book?

Kristi Duncan:

The reason why? Because this Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) is an unordinary book that the inside of the publication waiting for you to snap the idea but latter it will distress you with the secret that inside. Reading this book close to it was fantastic author who else write the book in such incredible way makes the content interior easier to understand, entertaining approach but still convey the meaning completely. So , it is good for you for not hesitating having this any more or you going to regret it. This amazing book will give you a lot of benefits than the other book get such as help improving your skill and your critical thinking approach. So , still want to delay having that book? If I ended up you I will go to the guide store hurriedly.

Marie Miles:

What is your hobby? Have you heard that will question when you got learners? We believe that that concern was given by teacher for their students. Many kinds of hobby, Everybody has different hobby. And also you know that little person including reading or as examining become their hobby. You need to understand that

reading is very important in addition to book as to be the matter. Book is important thing to add you knowledge, except your own teacher or lecturer. You will find good news or update with regards to something by book. Different categories of books that can you decide to try be your object. One of them are these claims Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T).
