Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology)

Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology)

A growing proportion of the world's population is dependent on **Seawater Desalination** as a source of fresh water for both potable and civil use. One of the main drawbacks of conventional desalination technologies is the substantial energy requirement, which is facing cost increases in the global energy market. "**Seawater Desalination**" presents an overview of conventional and non-conventional technologies, with a particular focus on the coupling of renewable energies with desalination processes.

The first section of this book presents, in a technical but reader-friendly way, an overview of currently-used desalination processes, from thermal to membrane processes, highlighting the relevant technical features, advantages and disadvantages, and development potential. It also gives a rapid insight into the economic aspects of fresh water production from seawater.

The second section of the book presents novel processes which use **Renewable Energies** for fresh water production. From the first solar still evaporators, which artificially reproduced the natural cycle of water, technology has progressed to develop complex systems to harness energy from the sun, wind, tides, waves, etc. and then to use this energy to power conventional or novel desalination processes. Most of these processes are still at a preliminary stage of development, but some are already being cited as examples in remote areas, where they are proving to be valuable in solving the problems of water scarcity.

A rapid growth in these technologies is foreseen in the coming years. This book provides a unique foundation, within the context of present and future sustainability, for professionals, technicians, managers, and private and public institutions operating in the area of fresh water supply.

From reader reviews:

Margaret Cardwell:

Do you have favorite book? If you have, what is your favorite's book? Book is very important thing for us to understand everything in the world. Each guide has different aim or even goal; it means that publication has different type. Some people truly feel enjoy to spend their time for you to read a book. They are really reading whatever they have because their hobby is usually reading a book. How about the person who don't like reading a book? Sometime, person feel need book once they found difficult problem or maybe exercise. Well, probably you should have this Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology).

Stephanie Gilley:

Does one one of the book lovers? If so, do you ever feeling doubt if you are in the book store? Aim to pick one book that you find out the inside because don't ascertain book by its protect may doesn't work this is difficult job because you are scared that the inside maybe not since fantastic as in the outside appear likes. Maybe you answer may be Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology) why because the amazing cover that make you consider with regards to the content will not disappoint you actually. The inside or content is actually fantastic as the outside or even cover. Your reading sixth sense will directly assist you to pick up this book.

Edward Carroll:

Are you kind of hectic person, only have 10 or perhaps 15 minute in your moment to upgrading your mind expertise or thinking skill also analytical thinking? Then you are having problem with the book than can satisfy your short period of time to read it because this time you only find reserve that need more time to be examine. Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology) can be your answer since it can be read by you actually who have those short free time problems.

Jeannine Lawson:

Reading a book to become new life style in this yr; every people loves to read a book. When you learn a book you can get a large amount of benefit. When you read ebooks, you can improve your knowledge, mainly because book has a lot of information in it. The information that you will get depend on what kinds of book that you have read. If you want to get information about your examine, you can read education books, but if you act like you want to entertain yourself look for a fiction books, this sort of us novel, comics, and soon. The Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology) provide you with a new experience in reading a book.
