Conversion of the Zero-point Energy of the Quantum Vacuum into Classical Mechanical Energy Claus Wilhelm Turtur

A perpetual motion machine - this can never exist. But energy sources nearly disregarded up to now - they exist. These are energy sources, which have been hardly under investigation, so that mankind did not yet learn how to get benefit from them. Most part of the universe consists of such energy, which is still called "invisible". A part of this energy is to be found within the so called zero-point oscillations of the quantum vacuum, thus within the empty void from the perspective of quantum physics. Although the author could convert a machine power of only 150 NanoWatts up to now, the fundamental principle of Physics for the conversion of vacuum energy is invented. The method plays a pioneering role. It is described here in many scientific details, and it is compared with other known proposals for the use of vacuum energy. The next step of research should be the enhancement of the generated machine power in order to come to technical useful dimensions. This is a lot of work still to be done.
